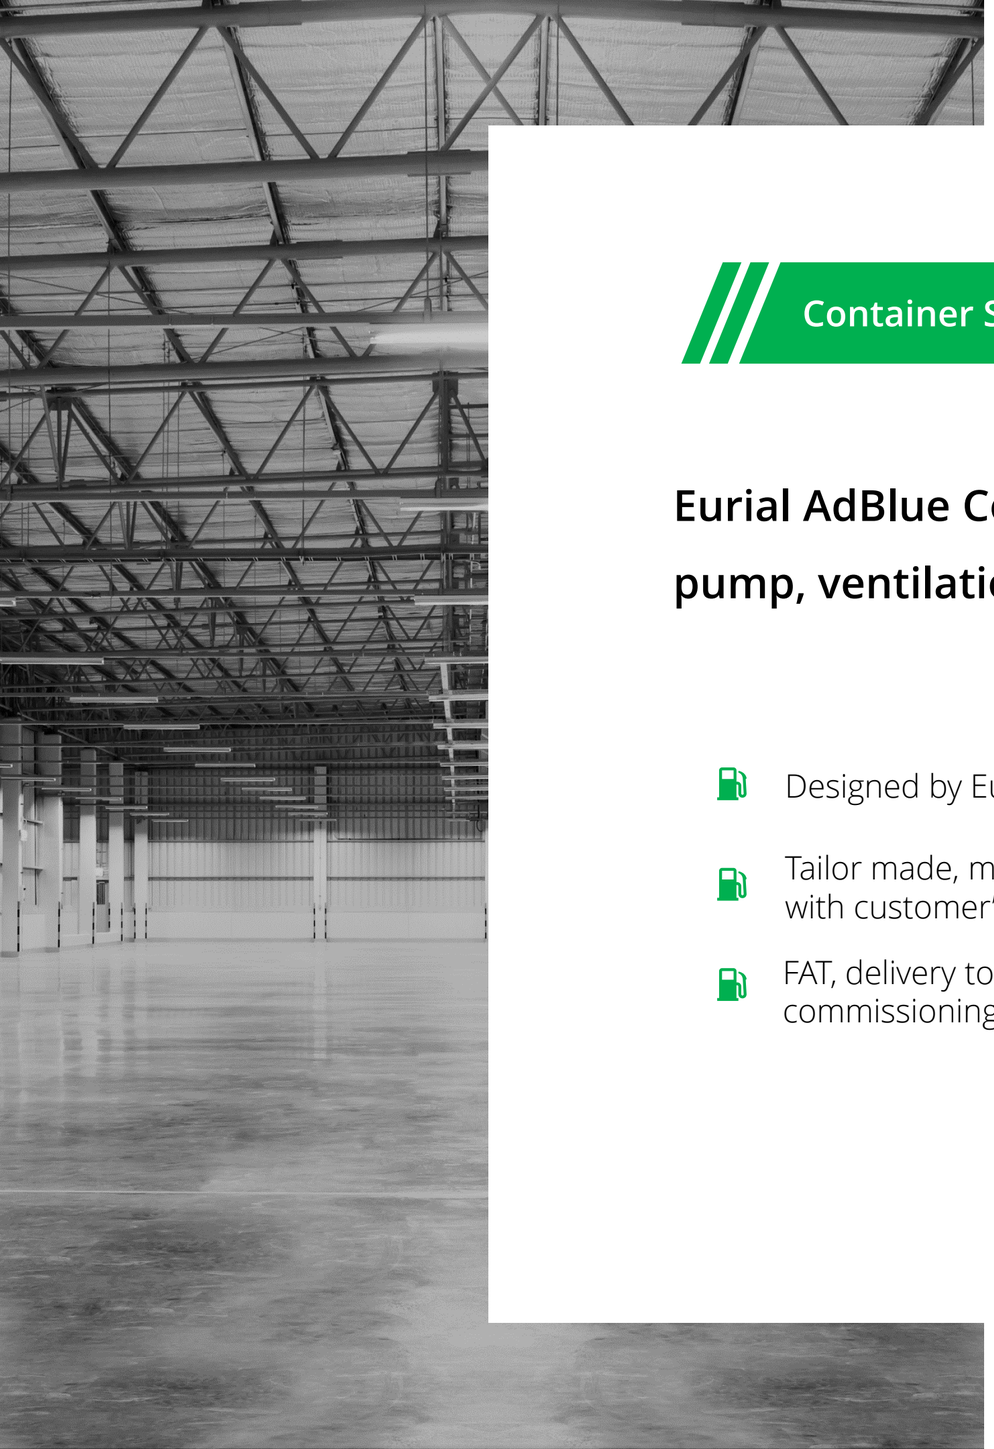
AdBlue Containerized Station

EURIAL
Fuelling your business

The passion for technology together with Eurial's technical capabilities and expertise places us among the top suppliers of tanks in Romania

During the 18 years of activity, we have completed over 1000 complex projects, and the portfolio includes over 500 satisfied clients both from Romania and abroad. In the last years, we developed new markets in countries such as France, Hungary, Bulgaria, Republic of Moldova, where we accomplished various types of projects and established several partnerships. We rely on quality and professionalism and meet all the requirements imposed by international standards, and continuous improvement is a part of our business strategy.



Container System

AdBlue®

Eurial AdBlue Container System completed with storage tank, transfer pump, ventilation and heating systems, ALUCOBOND version

- Designed by Eurial engineers;
- Tailor made, manufactured in accordance with customer's specific need;
- FAT, delivery to location, installation and commissioning included to the offer;
- The design is corresponding to NP 004/2005;
- In compliance with European Standards;
- After sale services.

Benefits

Eurial AdBlue Container Benefits

- TATSUNO dispenser’s integration;
- Reliable container designed and built internally;
- Station management system integration;
- Calibration, graduated ruler and standard;

Benefits

- Fewer commissioning permits
- Compatible with any ERP application
- Low CAPEX
- Low OPEX
- Easy mobility

TATSUNO

Equipment we use

1

2

The most common pumps we use for our projects are the professional pumps from Tatsuno. Over time, these have shown high quality and reliability, the hydraulic part of the pumps is considered the „best in the world", with a five years warranty. The Japanese manufacturer, with a long tradition in this field, ensure the calibration is carried out once every seven years and very few manufacturers comply with this requirement. This type of professional pumps is designed for complex projects and relies on high-quality and innovation.

The manufacturer recommends not intervening on the measuring body for a period of 7 years. The degree of wear over time is represented in the graph below: the measurement accuracy over time, related to the increase in the degree of wear. These performances were obtained and are calculated at a consumption of 750,000 l / year / flow meter.
The measuring body can be used for 7 years without deviation, without adjustments, without interventions or calibrations.

Applications

Our range of container stations offers an AdBlue storage and distribution solution. Are perfectly suitable for petrol stations, logistics, construction, transportation and manufacturing companies.

AdBlue container 5000 l

Suitable for logistic and transportation companies

Container suitable for small spaces

Manufacturing and construction companies

AdBlue Container 3000 l

Suitable for Petrol Stations

Service

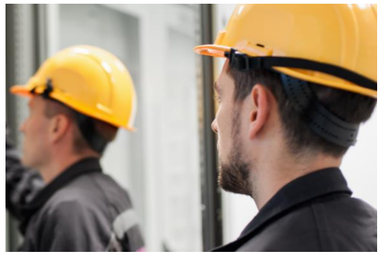
EURIAL
Fuelling your business

In House Service

For the transportable products (eg pumps, mobile tanks, management systems), we highly recommend choosing the option of in-house reparation. The advantages of this option include: eliminating the cost of moving the service team and the specialized equipment we own in the workshop.

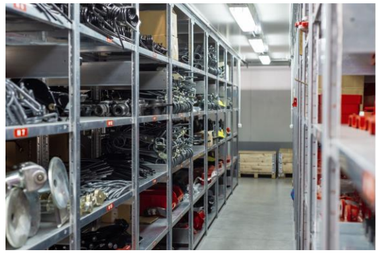
Remote Intervention

This type of intervention considerably reduces the time to solve the issues by avoiding Eurial's support team travel.



Service on-site

In case of technical issues with the products or equipment that are difficult to transport, one of our teams can solve the problem on-site.



Spare parts Department

We provide a variety of spare parts supplied by the most important suppliers in Europe (Piusi, Cemo, Horn Tecalemit). The spare parts we provide, have a high level of availability.

References

The expertise accumulated by Eurial is strengthened by partnerships and collaboration with other types of companies from Romania.
